2014 Evidence-based Instruments Report
RIA Application, Quality of RIA Process, Sustainability Check
**Indicator**

**RIA Application**

**Question**

To what extent does the government assess the potential impacts of existing and prepared legal acts (regulatory impact assessments, RIA)?

41 OECD and EU countries are sorted according to their performance on a scale from 10 (best) to 1 (lowest). This scale is tied to four qualitative evaluation levels.

- **10-9** = RIA are applied to all new regulations and to existing regulations which are characterized by complex impact paths. RIA methodology is guided by common minimum standards.
- **8-6** = RIA are applied systematically to most new regulations. RIA methodology is guided by common minimum standards.
- **5-3** = RIA are applied in some cases. There is no common RIA methodology guaranteeing common minimum standards.
- **2-1** = RIA are not applied or do not exist.

**New Zealand**

**Score 10**

Following its restrictive policy regarding regulation, the National Party-led government introduced a guideline in late 2009 with the effect that regulatory impact assessments (RIAs) are systematically undertaken for any policy activity involving options that may result in a paper being submitted to Cabinet and, accordingly, may lead to draft legislation. This aims at restricting new regulations to those that the government sees as necessary, sensible and robust and to avoid regulations which are ineffective and costly.

**United States**

**Score 10**

The U.S. government provides for extensive analysis of major decisions, within both the legislative and executive branches, and for administrative or regulatory decisions as well as legislation. Regulatory impact assessment for agency regulations is supervised by the Office of Management and Budget (OMB). Under an executive order from the early 1980s, the OMB has a mandate to assess all regulations that executive agencies seek to promulgate. For significant regulations, it must approve impact assessments conducted by the agencies as a condition for issuing the regulations. In
addition, the Government Accountability Office, which reports to Congress, conducts assessments on an ad hoc basis, mostly in response to requests by Congress (including committees or individual members). The Congressional Budget Office (CBO) conducts analysis of proposed bills, including cost estimates over a 10-year period. In fact, the most ambitious recent projects in policy analysis were studies by the CBO on health care reform and climate change. These were not limited to the budgetary impact, but addressed the wider policy consequences, including distributional and employment effects of climate change legislation, as well as a study on the regional impact of global warming in the United States.

The Congressional Research Service also conducted several notable studies on climate change. The CBO study on health care focused primarily on issues of budgetary impact, but it did touch on many other issues, including coverage. In 2011, President Obama ordered all agencies to put a system in place within 120 days for reviewing existing regulations to determine whether they can be amended or repealed, in order to reduce burdens on businesses. With respect to the volume and coverage of impact assessment, the U.S. government is exemplary.

Finland

Score 9

Systematic impact assessment is by now an integrated part of the Finnish legislative drafting process. Regulatory impact assessment activities abound and comprise, for instance, of a series of evaluation reports by the Ministry of Foreign Affairs that deal with principles of development policy and with partner countries and regions and many other topics. Also, the activities certainly include the corresponding reports from the Ministry of Social Affairs and Health. Reference should also be made to an international evaluation of the Finnish national innovation system, commissioned by the Ministry of Education and the Ministry of Employment and the Economy. Furthermore, the Ministry of Education and Culture has been preparing an evaluation plan for third-party evaluations and evaluations carried out to monitor learning outcomes: from 2014 evaluation activities that concern education will be concentrated into a single Education Evaluation Center. These are, however, only scattered examples. The general framework for regulatory impact assessments (RIA) is to be found in a system of program management that encompasses inter-sectoral policy programs. This framework was initiated in 2007 and is still applied as a guide to impact assessment.
Netherlands

Score 9

In the Netherlands, RIAs are broadly and effectively applied in two fields: Environmental Impact Assessments (EIMs) and Administrative Burden Reduction Assessments (ABRAs).

The development of a Standard Cost Model (CBA) method for evaluating ex ante legislation regarding compliance costs to business was entrusted, in 1998, to an ad hoc but independent advisory commission called the Advisory Board on Administrative Burden Reduction (ACTAL). ACTAL advises government and the States General how to alleviate the regulatory burdens on citizens, companies, and on professionals in care, education, public/private safety and social security. Since its establishment, ACTAL’s competency has evolved beyond a think tank function systematically aiming at the reduction of administrative burdens. ACTAL serves as the government’s watchdog, with two deputy ministers (of finance and economic affairs) overseeing its activities and a special interdepartmental project unit providing support. ACTAL reviews all ministerial ex ante evaluations for administrative burden reduction, assists ministerial units, and advises the Council of Ministers and the States General about the quality and effectiveness of ministerial regulatory proposals prior to formal decision-making or policy adoption. ACTAL’s findings are always reported in the explanatory memorandums attached to bills. The Council of Ministers also responds to ACTAL’s annual progress reports. In 2012 ACTAL published its first Regulatory Burden Audit of nine government departments.

Australia

Score 8

The federal government and the state and territory governments require the preparation of Regulation Impact Statements (RIS) for significant regulatory proposals. An RIS provides a formal assessment of the costs and benefits of a regulatory proposal and alternative options for that proposal, followed by a recommendation supporting the most effective and efficient option. RISs are thus not assessments of socio-economic impacts of regulatory proposals, although implicitly such impacts are taken into account as part of the process. More significantly, in recent years, while around 75% to 85% of all
Australian government proposals with significant impacts had a RIS, for proposals with highly significant impacts, less than this had a RIS.

Since many government functions and responsibilities are shared between the federal government and the states, these shared activities are coordinated through the Council of Australian Governments, which is the body that brings the federal and state governments together to decide policy. The procedures for the preparation of RIS proposals differ between the federal government and the Council of Australian Governments. Most states and territories have their own requirements for RISs that apply where a regulation will have effect in only a single state or territory. At the federal level, RISs are managed by the Office of Best Practice Regulation, which is part of the Department of Finance and Deregulation.

Citation:

Austria

Score 8

Under the recently published 2013 federal budget law, the government and its ministries are obliged to assess the impact of legislative proposals with respect to the public budget and on the basis of financial, economic, environmental, consumer-protection and employment issues. In addition, in order to avoid overregulation, the government’s legislative proposals must be assessed regarding their regulatory impact. Other detailed regulatory impact assessment (RIA) requirements exist in further decrees.

The results of RIA studies are published in the preface to each legislative proposal. In Austria, RIA is a very recently established, but nonetheless a rapidly evolving tool for legislators and parliamentarians. With the 2013 reform, RIA can now be considered an important component of the country’s legislative process.

Chile

Score 8

All newly proposed laws must be accompanied by a report summarizing their predicted fiscal impact and the financial implications for the government budget. This report is always prepared by the fiscal department of the corresponding ministry. Chile also has a constitutional restriction on policy proposals that imply budget changes. Legally, there is no obligation to
present a report concerning potential socioeconomic impacts that do not implicate the state budgets, but political practice shows that those implications are normally considered. Furthermore, there are supervisory bodies (Superintendencias) that monitor enterprises of a specific sector and elaborate evaluations and reports, but in a legal sense those supervisory bodies do not have the specific objective of evaluating the impact of regulations and proposed modifications of the legal framework. However, the evaluation of possible impacts tends to be a result of their work in a certain way. Chile counts with the following supervisory bodies:

Supervisory Board for Health (Superintendencia de Salud)
Supervisory Board for Pensions (Superintendencia de Pensiones)
Supervisory Board for Banks and Financial Institutions (Superintendencia de Bancos e Instituciones Financieras)
Supervisory Board for Securities and Insurance (Superintendencia de Valores y Seguros)
Supervisory Board for Education (Superintendencia de Educación)
Supervisory Board for Health Services (Superintendencia de Servicios Sanitarios)
Supervisory Board for Electricity and Fuels (Superintendencia de Electricidad y Combustibles)
Supervisory Board for Social Security (Superintendencia de Seguridad Social)
Supervisory Board for Casinos (Superintendencia de Casinos de Juegos)
Supervisory Board for Bankruptcy (Superintendencia de Quiebras)

In some areas, it is the line ministries themselves that assume the controlling mechanism.

Czech Republic

Czech Republic

RIA was introduced in the Czech Republic in 2005. In June 2011, RIA was reformed and became an integral part of the Government Competitiveness Strategy of the Czech Republic. The coordination of RIA was shifted from the Ministry of Interior to the Government Legislative Council, an advisory body attached to the Office of the Government, with a view to achieving a better coordination of the legislative process. In November 2011, a new quality control body, the Regulatory Impact Assessment Board (RIAB), was established. Unlike other advisory bodies, it is made up largely of prestigious academics and researchers and it publishes details of criteria used and of past judgments. It blocked almost all of the early proposals it considered on the grounds that analyses had been inadequate and referred them back for revision.
Denmark

Score 8

An instruction (cirkulære) from the PMO in 1998 to all ministries and agencies established the requirement of evaluating the consequences of proposed legislation and administrative regulations. Subsequently, a number of ministries developed texts advising the civil servants on how to carry out such evaluations. In May 2005, a common guide was written with the Ministry of Finance as lead ministry. A new version is in preparation.

The rules require impact assessments dealing with economic consequences for state and local governments, administrative consequences, business economic consequences and environmental consequences. The relation to EU legislation must also be assessed.

Thinking about consequences starts during the initial consideration of a new law or regulation (screening stage) and continues while the content and degree of new measures are considered (scoping stage). A detailed RIA is then worked out during the final stage (assessment stage).

Hence, RIAs have become a required part of Danish policy formulation.

The extent to which existing regulations are regularly assessed depends on the regulation in question and the feedback the administrative agency gets.

When new legislation is based on EU legislation the impact assessment will be included in the document (samlenotat) that goes to the European Affairs Committee in the Parliament. According to a rough estimate, about 40% of new Danish legislation is based on or related to EU regulations.

Estonia

Score 8

The process of impact assessment is quite well elaborated and some further measures have been implemented in 2011 – 2012. At the end of 2011, a government decree (Hea õigusloome ja normitehnika eeskiri) was adopted that included requirements to assess the impact of legal acts, to involve interest groups in the policymaking process and also to assess periodically the efficiency and outcomes of legal acts already in force. Special emphasis was placed on preparatory phases of legal amendments. According to the decree, social, demographic, economic, environmental, regional and administrative impacts have to be assessed in the process of preparation of a legal act.

At the end of 2012, the government adopted methodical guidelines of impact assessment in order to enhance the capacity and quality of RIA in ministries.

Because new regulations entail significant rearrangements and an increase in administrative workload, the decree will be implemented step by step. According to the guidelines, in 2012 RIA must be applied to at least a quarter of new legal acts, in 2013 to at least half of them, and in 2014 impact assessment regulations must be applied to all categories of legal acts, including existing ones.

Germany

Score 8

In 2000, the revised rules of procedure of the federal ministries (Gemeinsame Geschäftsordnung der Bundesministerien, GGO) came into effect, requiring that an impact assessment (Gesetzesfolgenabschätzung, GFA) be performed for every draft law. Thus, regulatory impact assessments are institutionally anchored in Germany. GFAs aim at limiting the amount of state regulation to no more than is necessary, examining alternative regulation possibilities and improving the quality of regulations. The GFA process analyses the intended effects and the unintended side effects of draft laws and potential alternatives. The Federal Ministry of the Interior has developed guidelines for the application of the impact assessment. An evaluation of actual effects, and therefore the production of a retrospective GFA of existing laws and regulations, is part of the assessment process.

The government’s Bureaucracy Reduction and Better Regulation program, implemented in April 2006, created a number of new policies relevant to the assessment process. It established the National Regulatory Control Council (Normenkontrollrat, NKR) as an independent watchdog and advisory body tasked with assessing new legislation. It adopted the Standard Cost Model
as a tool for measuring bureaucratic costs. Finally, it institutionalized the bureaucracy-reduction process by creating a coordination unit within the cabinet office and setting up a committee at the ministerial undersecretary level. However, the NRK only concentrates on potential bureaucratic costs, and not on impacts of laws foreseen through the evaluation process. In addition, about 30% of laws – specifically, those which are initiated by parliament – are not reviewed under the NKR.

A separate program is in place for environmental-impact assessment. The likely budgetary and bureaucratic consequences of draft laws also have to be assessed.

Japan

Score 8

The basic framework for policy evaluation in Japan is the Government Policy Evaluations Act of 2001. In 2005, the system was considered to have been implemented fully.

The process is administered by the Ministry of Internal Affairs and Communications (Administrative Evaluation Bureau), while the ministries are charged with doing their own analyses, which has led some to question the impartiality of the procedure. However, a number of evaluations in strategically important fields have been undertaken by the Interior Ministry itself. In 2010, this ministry took over responsibility for policy evaluations of special measures concerning taxation as well as impact analyses of regulations dealing with competition issues.

The Ministry of Finance also performs a Budget Execution Review of selected issues, and the Board of Audit engages in financial audits of government accounts.

The fragmented nature of such assessments seems to indicate a potentially low level of reliability and effectiveness. Indeed, it is difficult to point to a major policy arena in which these endeavors have led to major improvements.

Latvia

Score 8

The government decision-making process requires every draft legal act to undergo an assessment. This assessment is documented in an annotation that accompanies the draft as it moves through the review process to the cabinet. The annotation addresses budgetary impact, impact on particular target groups and the cost of implementation. In practice, the quality of annotations varies widely depending on the approach taken by the drafters – it can be a detailed, evidence-based analysis, or it can serve as a simple pro forma cover sheet providing a brief summary of intent. Minimum standards for annotations are not enforced.

The government office revised the annotation requirement in 2013, with the new rules taking effect in January 2014. The new annotation form will require a justification for introducing new regulations, and include an assessment of compliance costs to citizens and businesses, and an assessment of impact on public health. Civil servant training was scheduled in 2013 to improve the quality of annotations. The revised regulations also seek to improve stakeholder involvement in the early stages of drafting by providing information and discussion documents – so-called green papers – to the public at an earlier stage, during the line-ministry drafting phase.

Mexico

Score 8

Regulatory impact assessment (RIA) was introduced in Mexico in 1997. In 2000, RIA was implemented broadly through reform of the Federal Administrative Procedure Law. Thus, RIA in Mexico is established by law, and not by presidential or prime ministerial degree as in some other OECD countries. There is a government agency belonging to the Ministry of Economy, the Federal Commission for Regulatory Improvement (Comisión Federal de Mejora Regulatoria, COFEMER), which is responsible for performing impact assessments on new proposals if they generate compliance costs. COFEMER spot-checks existing regulations, but does not assess them systematically. Nevertheless, despite some limitations, it has been quite active since it was established at the beginning of Fox’s term in 2000, and its reputation in Mexico is good. However, opinions issued by COFEMER are not binding on other agencies and ministries. More then 10 Mexican states have also adopted RIA for subnational regulatory projects. Moreover, evidence-based evaluations of several Mexican public policies in the social sector have gained international recognition, and have had
significant spillover effects to the international evaluation community. This is especially true for social policies, where rigorous impact assessments based on randomized control trials of the Education, Health, and Nutrition Program (Programa de Educación, Salud y Alimentación, PROGRESA) can be perceived as an international showcase on how to evaluate large-scale social programs. In this area, the National Council for the Evaluation of Social Development Policy (CONEVAL) is responsible for carrying out rigorous impact evaluations in large social-sector programs. CONEVAL is an autonomous and independent agency created by the 2007 General Law on Social Development (Ley General de Desarrollo Social).

Norway

Score 8

Norway introduced a system of regulatory impact assessment (RIA) in 1985, and revised it in 1995. The ministers and the government are responsible for providing comprehensive assessments of the budgetary, environmental, health and human-rights effects of their proposals. Consequences should be quantified as far as possible, including by means of a thorough, realistic socioeconomic analysis. A set of codified guidelines (the Instructions for Official Studies and Reports) governs the production of RIAs. However, the ministry in charge has some discretion to decide when an RIA should be conducted. There is no formal rule establishing when a full RIA must be produced, and when a less detailed assessment is sufficient.

If performed, RIAs are included as a separate section in the ad-hoc reports commissioned from experts or broader committees, as well as in white papers and final bills. There is no central body in the government administration that conducts quality control on RIAs, although each department has issued guidelines on how RIAs should be conducted. An interministerial panel on economic impact assessments was established in 2005, bringing together RIA experts from various ministries; this continues to have an advisory function with respect to improving the quality of RIAs. The parliament may send back a proposal if it regards the attached RIA as unsatisfactory. This has actually occurred in a number of cases.

Poland

Score 8

Since 2001 the completion of regulatory impact assessments (RIAs) has been mandatory for all government bills and regulations. Comprehensive RIA guidelines were first introduced in 2006 and updated by the Regulatory Reform Unit of the Ministry of Economics in 2009. At the end of 2011, traditional RIAs were complemented by a new “regulatory test,” a short
document consisting of 18 items and questions. Whereas a RIA is usually implemented after a decision has already been made to proceed with regulations, the regulatory test is supposed to take place at an earlier stage of decision-making. Unlike a RIA, however, the regulatory test is not obligatory. Despite various attempts at strengthening the process of RIAs, in practice many assessments do not comply with guidelines and lack the critical information necessary for making informed decisions.

Citation:

South Korea

Score 8

There were no changes in regulatory impact assessment (RIA) policy in the period under review. RIA has been mandatory for all new regulations since 2005, and is applied to older regulations if they are strengthened in any way. RIAs assess proposals’ socioeconomic impacts and provide cost-benefit analyses. They mention the purpose and need for regulation, but focus on cost-benefit analysis of the proposal. RIAs are focused on a cost-benefit analysis of proposed regulations. They do analyze alternative options and discuss potential pros and cons, but experts say that in practice these alternatives play little role in the drafting of final regulations. There is still a wide gray zone enabling regulatory organizations to decide in a discretionary fashion.

Switzerland

Score 8

There is no formal institution responsible for ex-ante impact assessment in Switzerland. Article 170 of the constitution states that “(t)he federal parliament shall ensure that the efficacy of measures taken by the confederation is evaluated.” In some ministries such as the economics ministry, individual units occasionally perform ex-ante impact assessments. Furthermore, ex-ante evaluations by the administration always include checks for consistency with existing law (performed by the Ministry of Justice), compatibility with EU regulations, and if necessary, analyze budget implications, probable administrative costs and personnel requirements. Ex-post evaluations have also been strongly developed; however, it is unclear whether the results of these analyses have any substantial effect on implementation.

Beyond these processes, functional equivalents of impact assessments do exist. First, expert commissions that draft or suggest laws also evaluate alternatives, while examining the potential impacts, benefits and problems
associated with proposed solutions. Second, and probably more important, is the so-called consultation procedure derived from Article 147 of the constitution. This article stipulates that “the cantons, the political parties and the interested circles shall be heard in the course of the preparation of important legislation and other projects of substantial impact, and on important international treaties.” As a consequence, all those who are affected by a planned law have a constitutional right to give their opinion as to its pros and cons.

In comparative perspective, Switzerland was a relative latecomers to performance management policies, as were Germany and Austria. It was only in 2011 that the federal administration decided to consistently implement some form of performance management.

**United Kingdom**

**Score 8**

The reduction of regulation costs has been a long-standing policy goal pursued by Labour governments – the aim was to reduce the cost of regulation to businesses in Britain by 25% by 2010. The new coalition government is following in these tracks, and any new regulatory proposal must be submitted to the Reducing Regulation Committee, a cabinet subcommittee tasked with scrutinizing, challenging and approving all new regulatory proposals. Regulatory Impact Assessments (RIAs) have to be prepared for all legislation which affects businesses, charities or voluntary bodies in order to assess the benefits and burdens of the planned measure. Academic research, however, has questioned the impact of these assessments as their results are not systematically integrated into the decision-making process.

Citation:

**Lithuania**

**Score 7**

Although the production of impact assessments for draft government decisions became mandatory in 2003, high-profile regulatory initiatives are in most cases not in fact subject to in-depth assessment. Seeking to improve the relevance and quality of impact assessments, the Kubilius government conducted a review of the impact assessment system. The Butkevičius government decided in 2013 to focus the system on top-priority regulatory decisions, while applying rigorous impact-assessment methods such as cost-benefit or cost-effectiveness analyses. The results of such assessments will be presented to the government. In addition to ex-ante impact assessments,
the new impact-assessment system will include ex-post assessments. However, as of the time of writing, this reform had not yet been tested, as no high-profile decision had yet been made through the selection of the best alternative following an RIA process. Thus, in practice, the country’s RIA system has evolved from assessments being performed on all new regulation (as established in 2003), but in a very formal manner and often without properly evaluating alternative policy instruments, to a point where it is not performed at all, despite the fact that new methodologies have been adopted and successive governments have declared their intention to improve ex-ante and ex-post assessment.

**Sweden**

**Score 7**

The purpose of regulatory impact analysis (RIA) is to assess the degree to which regulation has negative and/or unintended consequences for the targets of regulation. More broadly, RIA is nowadays used to avoid increasing regulatory burdens on private businesses. RIAs are also used to examine which regulatory framework can be simplified or abolished. Sweden, according to an evaluation, has had “rather modest” results from RIAs. Simplifying rules pertaining to private businesses has been an important part of economic development policy over the past several years, but RIAs as a specific model of analysis do not seem to be used systematically and over a broad range of issues.

*Citation:
Erlandsson, M. (2010), Regelförenkling genom konsekvensutredningar (Stockholm: Sieps).*

**Canada**

**Score 6**

Canada’s assessment of the potential socioeconomic impact of draft laws is somewhat irregular, as regulatory impact assessments (RIA) are performed randomly, except in areas such as environmental projects where they are required by statute. The current government has faced persistent complaints that it has made explicit efforts to discourage the use of research and science in policymaking through cuts to federal science programs, legislative changes implemented as a part of the recent budget implementation bill, and the muzzling of scientists in government agencies (notably Environment Canada). The replacement of the mandatory long-form census with the voluntary National Household Survey (NHS) was seen by many academics as a major impediment to informed and evidence-based policymaking.

*Citation:
Croatia

Score 6

The EU accession process has accelerated the development of RIA in Croatia. In July 2011, the Kosor government adopted an RIA bill and re-established the Government Office for Coordination of the Regulatory Impact Assessment System that had been abolished in July 2009 as a reaction to populist critique. In accordance with the RIA Action Plan for 2013 – 2015, the office became a department of the government’s Legislation Office and RIA implementation coordinators were appointed in all ministries. All government bodies had to prepare annual regulatory plans in late 2012 specifying which of the planned regulations should undergo an RIA. Almost all ministries (with the exception of the Ministry of Foreign and European Affairs) posted their annual regulatory plans on their websites. It was announced that 39% of all bills would undergo the planned impact assessment.

Malta

Score 6

Malta’s policy on regulatory impact assessments (RIA) is not fully developed and the process of filing is also not fully integrated in Maltese policymaking; however, a RIA process does exist, with the Cabinet required to approve RIAs for government notices, regulations and by-laws. This process is detailed in the Small Business Act, Chapter 512 in Maltese law. However the RIA process has been questioned, as it is often seen as only a formality and at times is said to lack substance. Nonetheless, the European Union utilizes RIAs as part of all major regulatory projects, and therefore better incorporating the RIA process into Malta’s regulatory framework is a goal.

Romania

Score 6

RIA-related procedures were introduced in Romania in 2005. At least in theory, legislative proposals cannot enter the legislative process without RIA approval from the Public Policy Unit (PPU) located in the Secretariat General of the Government (GSG). Government Decision no. 775/2005 standardized the presentation of legal acts proposals by requiring that they be accompanied by a “document of public policies” that evaluates the proposal’s potential social, economic and environmental impact, and it outlines three implementation options. With Government Decision no. 1361/ 2006, the government extended the standardization of the impact analysis to proposed single legal acts. Furthermore, in 2009 the government published a manual for monitoring and evaluating public policies, which sets common minimum standards for RIA methodology.

Slovakia

Score 6

When RIA was introduced in Slovakia back in 2001, no central unit in charge of RIA was installed in the center of government. In response, the first Fico government introduced a Uniform Methodology of Assessment of Selected Impacts in 2008, which was updated by the Radičová government in 2010. Four ministries are involved in the process (Ministry of Economy, Ministry of Finance, Ministry of Environment, Ministry of Labor, Social Affairs and Family), with the Economic Analysis Division of the Ministry of Economy with its Economic Analysis Division taking the coordinating role. While these changes have improved the efficiency of RIA, the use of RIA still suffers from a high degree of fragmentation.

Cyprus

Score 5

Since 2007, a Ministry of Finance committee has led a project aimed at developing better regulation, with liaison officers in all ministries. Regulatory impact assessment (RIA) is one key focus of the project. Every new regulation is supposed to include an RIA. To date, this has taken the form of a questionnaire initially drafted by the Ministry of Finance, and revised several times as deemed necessary. However, impact assessment reports attached to draft laws sent to the Legal Office for legal review have had gaps, been too general, or in many cases have been simply absent. A new oversight mechanism for receiving and reviewing impact assessment reports was created in 2011. This body has not yet released any reports on its operation, however. Its bureaucratic position as a part of the Finance Ministry
is noteworthy, as it should have fallen under the purview of the Legal Office. It is unclear whether draft laws have regularly been sent to the oversight committee, or whether the Council of Ministers has sent back proposed laws that have failed to go through this review process.

One typical means of assessing the impact of new laws was for a line ministry to seek the views of other ministries on a proposed measure. As proposed laws reach the legislature, the House of Representatives regularly invites stakeholders likely to be affected to hear their views during committee sessions.

France

Score 5

The practice of compiling regulatory impact assessments (RIAs) has been followed since 1995, notably under the supervision of the PMO. However, there is still no systematic RIA process with comparable rules and methodologies; this is just one reason why there is an excess of legislation with an insufficient analysis of regulatory impact. There are partial substitutes, however. The finance and budget ministries try to systematically evaluate the fiscal impact of any new measure. This evaluation might be biased, as considerations may be exclusively motivated by financial and budgetary concerns, however. In some ministries (such as industry, agriculture and social affairs) there is also a tradition of analyzing the impact of planned policies. In other sectors, the law might impose these assessments (such as with the environmental and industry ministries, for instance). A legal assessment is systematically practiced by the Conseil d’Etat before the adoption of a regulation or governmental bill. Parliamentary committees also often do an excellent job of regulatory assessment. However, what is lacking is a systematic cross-examination involving all the main stakeholders. Former President Sarkozy, with the goal of trimming bureaucratic costs, instituted the so-called RGPP (Revue Générale des Politiques Publiques). It has permitted the cutting of around 100,000 positions, but the process has been highly criticized by the opposition and by the unions. President Hollande has decided to move to another type of review (Modernisation de l’Action Publique) but nothing precise at the time of writing is yet in place.
Ireland

Score 5

The 2011 Programme for Government states, “We will require departments to carry out and publish Regulatory Impact Assessments [RIAs] before government decisions are taken.” In principle, RIA is used by all government departments and offices.

It is applied to:

• proposals for primary legislation involving changes to the regulatory framework
• significant statutory instruments
• proposals for EU directives and significant EU regulations when they are published by the European Commission
• proposals for legislation by policy review groups

Prior to the discussion of legislative proposals by cabinet committees, RIAs are prepared by departments for consideration by relevant senior officials.

In reality, the range of RIAs completed and published is narrow. The last published of completed RIAs dates from 2009.

In response to parliamentary questions on the topic in July 2012, the prime minister responded: “My department will shortly be consulting departments generally about the question of publication of regulatory impact analyses carried out before government decisions are taken.”

Italy

Score 5

RIAs are in principle required from all ministries and local authorities (under laws 50/1999 and 246/2005). RIAs at national level fall under the responsibility of the Prime Minister’s Office (PMO). The PMO is responsible for the review and quality control of RIAs produced by ministries, as well as for the coordination of activities associated with an RIA. The Presidency of the Council of Ministers, with its department for juridical and legislative affairs, is the body responsible for the elaboration of RIA methodology. However, it is questionable whether sufficient resources are available within the presidency to implement RIA effectively. Implementation has in fact been far from systematic since the beginning of the RIA program. As a
consequence, a new plan adopted in July 2007 by the Prodi II government created new, simpler RIA forms that were implemented from November 2007 onwards. Further implementation rules were approved in 2008 – 2009 by the Berlusconi IV government (DPCM 170/2008 and Directive 26 February 2009). According to this framework, the performance of RIAs at the ministerial level is intended to be enforced by a prohibition on Council of Ministers’ discussion of any proposal lacking this assessment. However, in February 2010, the parliamentary committee (Comitato per la Legislazione) responsible for monitoring the quality of legislation at national and regional levels discovered that in a sample of 20 regulations approved by the government in the previous 10 months (March 2009 – January 2010), only eight laws had been accompanied by the requested RIA.

In May 2012 under the Monti government the third report on the implementation of RIAs was presented to the parliament. This report highlighted a quantitatively increasing diffusion of RIAs but on average found they were still not fully satisfactory, being often more formal than substantial, or too legalistic, etc.

Citation:

Slovenia

In Slovenia, RIA guidelines were largely copy-and-pasted from the European Union. The existing guidelines call for a detailed analysis of the need for, and the purpose of, a new regulation. In practice, however, RIA quality is very uneven, and there are no official statistics about implemented RIAs. As fast-track legislation is exempt from RIA, RIA has not been applied to at least a third of all legislation in the period under review.

Bulgaria

According to article 28 of the Law on Normative Acts in Bulgaria, every draft for a normative act (starting from the acts with highest power such as codes and laws, down to municipal regulations and instructions) needs to be accompanied by explicit motivation and by a report including an obligatory assessment of results. In theory, the accompanying report is supposed to look at all the effects of the proposed legislation – budgetary, economic, social and environmental – and its impact on the effectiveness of other policies. In practice, this is rarely done. In accordance with the law every normative act is accompanied by a motivation and a report, but only budgetary environmental impact assessments are conducted in depth.
Hungary

Score 4

Hungary has a long history of implementing regulatory impact assessments (RIAs) for legislation. However, the RIA process has suffered from sluggish implementation and is applied only in some cases. The Orbán government amended an act on lawmaking that includes RIA provisions, creating the position of deputy state secretary in the Ministry of Public Administration to be responsible for feasibility studies as well as establishing the ECOSTAT Government Feasibility Center to assist in the preparation and implementation of RIAs. In practice, however, RIAs have been almost exclusively applied for environmental issues or in cases where international obligations have demanded it. One reason why RIAs have not been applied meaningfully, and sometimes not even formally, to economic, fiscal and social policies has been the hectic pace of creating austerity packages.

Spain

Score 4

There is no tradition in Spain of concern on the quality of legislation (apart from purely formal legalistic issues that are controlled by the Council of State). The financial costs of passing and implementing any new law have also been systematically monitored since the 1990s but a wider concern on the substantive quality and efficiency of legal rules (the effectiveness of regulatory impact on their target reality) was only established in 2009. The introduction of RIAs has facilitated to specify a general procedure to be applied across content area (emphasizing that draft legislation must address economic and budgetary considerations as well as any other relevant aspects, such as environmental impact, gender equality concerns, and any possible effect for disabled people). Because this is a relatively new obligation, it is difficult to determine precisely how effectively impact assessments have been performed so far. In some instances, the RIA has been efficiently used; in others, it seems to have been a formal requirement fulfilled by the public administration.

Turkey

Score 4

Since 2007, the completion of a regulatory impact assessment (RIA) is required for all legislation (laws, decrees and other regulatory procedures), excluding issues relating to national security, the draft budget or final accounts (under Article 24 of Regulation 4821 on the Procedure and Principles of Preparing Legislation, 12 December 2005). The Prime Minister’s
Office on 3 April 2007 issued a circular that provided a guide on how to prepare assessments. Yet the RIA process is followed only rarely in Turkey.

Despite regulations adopted to encourage administrative simplification in April 2012, the introduction of RIAs has not improved the quality of government legislation. The government has not, for example, conducted a RIA prior to the adoption of certain key legislation, such as education reform. A regulatory impact assessment of the EU-Turkey Civil Society Dialogue was performed, however, in an attempt to draw an estimate for future assistance. In 2012, an RIA was filed over European law Seveso II, dealing with industrial pollution control and risk management. In general the RIA process in Turkey has suffered due to insufficient awareness of the benefits of the process, underdeveloped administrative capacities and the decreasing importance of harmonization with EU norms.

Citation:

Luxembourg

Score 3

At the end of the 1990s, Luxembourg launched its first draft for regulatory impact assessments (RIAs) to simplify administrative procedures at both the national and European levels. Since 2004, the government has systematized the potential impact of legislative proposals by aligning legislative and administrative processes under the responsibility of the competent authority, the Committee for Administrative Simplification (Comité à la Simplification Administrative, CSA).

All draft bills as of 2009 must pass through a regulatory impact assessment. Within eight weeks before adoption of a draft bill, the government has to carry out consultations with stakeholders, considering their expertise and responding to requests. Based on adequate analysis, a draft bill is adapted, completed and submitted to parliament. The impact assessment is necessarily attached to legislation or regulation submitted to the Council of Ministers. Prior to submission, the secretariat of the Council forwards a copy to the CSA, which prepares a formal statement to the Council.

The standard form of evaluation of impact (“fiche d’évaluation d’impact”) was revised in 2010 to include gender mainstreaming principles. It enabled a close cooperation with the Ministry for Equal Opportunities. Although regulatory impact assessment schemes have been instituted for some years, there is still room for improvement, especially in making such evidence-
based instruments more widespread. Further improvements should be implemented through an ex-ante verification process on a national and a European level.

Citation:

Greece
Score 2
RIA has been nominally adopted but in practice policy proposals are not accompanied by RIA. The Prime Minister’s Office issued a prime minister’s circular in July 2006, requesting that all ministries start RIA in their policy field, but in practice little progress has been achieved since then.

Israel
Score 2
The government does not conduct regulatory impact assessments.

Belgium
Score 1
Before making a decision, the government will typically seek the opinions of stakeholders in an attempt to prevent misguided policy action. But there are no formal regulatory impact assessment procedures, and surprising policy outcomes are not exceptional. One example is the law crafted to end the use of nuclear energy. No specific coordination, evaluation or action plan has been implemented and therefore the law has simply been rejected; and the planned lifetime of existing central nuclear facilities have been extended (concerns exist however that the required investment to ensure plants remain in good operating condition have not been properly planned, given the extent of political wavering on the issue). At the time of writing, two older nuclear reactors are closed for security reasons; no specific plan for the future of nuclear energy has been implemented.

Iceland
Score 1
Regulatory impact assessment (RIA) is not and never has been applied in Iceland.
Portugal

Score 1
The change in government appears to have undone the very tentative (and small) advances in the domain of RIA. There is little or no systematic and formalized RIA. Moreover, in some cases when impact assessments are supposedly carried out, their results are not publicly presented. For instance, when proposing controversial changes to the social security contribution system in September 2012, the minister of finance stated that an impact assessment of the measure carried out by the government showed this measure would increase employment by 1%, and exports by 1%–2% within two years. However, this report was never published or made publicly available, even when other studies were carried out by academics disproving these results, and the measure was ultimately withdrawn by the government later that same month.
Quality of RIA Process

Does the RIA process ensure participation, transparency and quality evaluation?

41 OECD and EU countries are sorted according to their performance on a scale from 10 (best) to 1 (lowest). This scale is tied to four qualitative evaluation levels.

- **10-9** = RIA analyses consistently involve stakeholders by means of consultation or collaboration, results are transparently communicated to the public and assessments are effectively evaluated by an independent body on a regular basis.
- **8-6** = The RIA process displays deficiencies with regard to one of the three objectives.
- **5-3** = The RIA process displays deficiencies with regard to two of the three objectives.
- **2-1** = RIA analyses do not exist or the RIA process fails to achieve any of the three objectives of process quality.

Czech Republic

**Score 9**

There are two forms of RIA, a short and a comprehensive one. The reforms in 2011 substantially decreased the previously high number of regulations subject only to a short RIA. Without an overview of impacts and a statement from the Regulatory Impact Assessment Board (RIAB), draft regulation can no longer proceed further in the legislative process. The activities of the commission are public; it seeks responses from interested parties and publishes its judgments.

Denmark

**Score 9**

The ministry in charge of preparing the legislation or regulation includes relevant stakeholders in the RIA process, such as affected ministries and interest organizations. If, for instance, a proposal is expected to have costs for business, the Ministry of Business would be consulted. The ministry would also consult with business interests. The proposal going to the Parliament would list all departments, agencies and organizations that had been consulted. The rules require the assessment to be in non-technical language so that it is accessible to the public. The corporatist element of preparing laws may have decreased in the last decade, but organizations are still very involved in the administrative structures.

After the entry into force of the new legislation, feedback will come from the stakeholders, the wider public and media. MPs in Denmark are responsive to problems.
Germany

Score 9

The National Regulatory Control Council (Normenkontrollrat, NKR) cooperates with a large number of different actors on various levels of the administration. Cooperation with German states and local authorities has been intensified, especially in the development of methodological standards for the assessment of compliance costs. Moreover, the potential to improve institutional dialogue between various administrative levels has been further enhanced by the seconding of experts from federal-state RIA units to the Federal Chancellery’s Better Regulation unit (Federal Government Report 2012: 6). Since social security institutions are self-governed in Germany, their evaluation does not fall under the jurisdiction of the NKR. But in order to facilitate policy learning, coordination between the NKR, social insurance carriers, the federal statistical office and experts from individual federal ministries takes place, focusing on simplification measures and cost-reduction plans. Mechanisms for cooperation across the European Union and within the OECD also exist.

Netherlands

Score 9

RIAs are obliged to mention one or several alternatives to the option chosen by an initiator. According to the Advisory Board on Administrative Burden Reduction (ACTAL) guidelines, alternative options for Administrative Burden Reduction Assessments (ABRAs) are investigated. The option involving the greatest cost reduction ought to be selected, in principle. It is not known to what extent practice follows theory. Previous limitations in burden reductions for several target groups have been eliminated by involving stakeholders and decision makers in the production process of RIAs.
New Zealand

Score 9

The Treasury’s Regulatory Impact Analysis Handbook offers comprehensive guidance with regard to consultation within government as well with stakeholders, to transparency, and to quality evaluation. The major instrument for consultation and transparency is the Regulatory Impact Statement (RIS). Independent quality assurance is to be obtained either by a unit located within the Treasury or through a suitable internal review process. A quality assurance statement is to be provided in the Cabinet paper.

Citation:

Norway

Score 9

The quality of RIAs associated with parliamentary bills shows great variation, but is generally good. At a minimum, parliamentary bills describe the financial and administrative (governmental) consequences of a proposal. Other costs are not quantified systematically or regularly when preparing bills. Affected parties will be also typically be invited to present their views in a public hearing, before a decision is being made. The RIA system is strong in terms of consultation, transparency and creating a broad political consensus around decisions. However, it is weaker in terms of technical quality.

Finland

Score 8

Adopted in 2007 and superseding as well as supplementing the then valid documents, such as the Bill Drafting Instructions (2004), impact assessment guidelines as part of the drafting of legislation provide a framework for the process of regulatory impact assessments (RIAs). The revision bureau of the Ministry of Justice Law Drafting Department monitors compliance with these impact assessment guidelines. Impact assessments cover the economic impact of proposed legislation, its administrative impact, environmental impact and social impact, and guidelines describe what impacts may be involved, how the impact may be assessed, and what methods and information sources are available; also, the guidelines provide contact information for expert advisers. For instance, assessments deal with the economic impact on households, on businesses or on public finances, not to mention the overall economic impact. Concerning method, the guidelines recommend the use of statistical data, questionnaire data, expert analyses, and, when necessary, qualitative methods. Generally speaking, the RIA process in Finland is well-structured and emphasizes quality.
Japan

Score 8

According to the Basic Guidelines for Implementing Policy Evaluation (Revised) of March 2007, the necessity, efficiency and effectiveness of measures are to be the central considerations in evaluations. However, issues of equity and priority are also to be included. The structure and content of assessments are further clarified in the Policy Evaluation Implementation Guidelines of 2005 and the Implementation Guidelines for Ex-Ante Evaluation of Regulations of 2007; all of these specifications contain quite demanding tasks that must be performed as a part of the evaluations.

Since 2010, for example, it has been obligatory for any ministry considering a tax measure to present an ex-ante evaluation. If the measure is in fact introduced, it must subsequently be followed by an ex-post examination.

Mexico

Score 8

RIA was introduced in Mexico in 1997 and its usage has spread from the federal government to some state governments. It seems to have established itself as a legitimate part of the policymaking process. The relevant government agency, COFEMER, contains some 60 officials and is responsible to an interdepartmental committee that ultimately reports to the Ministry of Economy. COFEMER does not have a veto on new proposals, but it must be consulted and can express an opinion. Its position vis-à-vis the ministries was strengthened by an additional presidential order by Calderon in 2007. It can prevent new regulations from coming into force until the consultation process is complete. COFEMER has also been active in negotiating the streamlining of procedures with individual Mexican states. This is significant, as much regulation is generated at subnational levels. After a quiet start, COFEMER has played a significant role in Mexico’s pro-competitive policy.

Poland

Score 8

Stakeholders are often involved in regulatory impact assessments (RIAs), and the results of assessments are published on ministry websites as well as on the website of the Government Legislative Center (Rządowe Centrum
Legislacji). The responsibility for checking the quality of individual RIAs does not rest with an independent body but with a special RIA unit in the Chancellery of the Prime Minister. This unit was strengthened after the 2011 elections through an increase in staff and by being moved to the Chancellery’s Department of Strategic Analysis.

United Kingdom

Score 8

The RIA process is transparent – guidance on how to do it is accessible online. There is also a quality evaluation – all impact assessments are scrutinized by the Regulatory Policy Committee (RPC) which provides feedback for the Reducing Regulation Committee on the quality of the analysis and evidence presented. Deficits can be seen with respect to participation, however. While the RPC is always keen to hear the views of stakeholders on the impacts of new proposed regulation, there is no formal mechanism for their involvement, and evidence submitted by them is considered but not discussed. On the other hand, the government invites direct comment on the process so that it can be considered to make an effort to engage citizens and – perhaps most importantly – businesses. There is a one-in-two-out principle for new regulations, with information regularly updated online.

United States

Score 8

Regulatory impact assessment is a highly political process, with a strong tendency for results to reflect the preferences and expectations of the agency or political official that controls the process. Under Republican presidents, the process was frequently directed toward containing or curtailing environmental and work safety regulations put out by the Environmental Protection Agency and the Occupational Health and Safety Agency. Under Obama (as in the Clinton administration), the process is more biased toward issuing new regulations. Indeed, a 2011 study of regulatory impact assessments by the George W. Bush and Obama administrations demonstrates the biasing effect of political priorities. The Obama administration has issued new rules at a rate 40% higher than either Clinton or Bush. But while Obama’s regulators report costs triple those of Bush’s, they report benefits eight times higher. Some of the difference is in the Obama administration’s methods, which take account of various co-benefits and impute private benefits (through cost savings) that have not elicited a market response.

In any case, the differences in overall results between administrations suggests that many or most proposed regulations would receive opposite
assessments from the Bush and Obama administrations, rendering the value of the assessments questionable at best.

Regulatory assessment will thus be of limited value until the government adopts clearer standards and best practices for the conduct of the analyses, presumably under the auspices of a nonpartisan institution such as the Congressional Budget Office.

Citation:

Chile

Score 7

Given the more informal and non-institutionalized character of instruments used for regulatory impact assessments, reports tend not to specify the purpose of and the need for a regulation. Furthermore, they do not tend to analyze alternative options. Depending on the topic, stakeholders may play a certain role in the RIA process but their accessibility and communication do not necessarily foster their relevance to the political process in the mid- or long-term. Normally, there are no evaluations of RIA assessments by independent bodies.

Latvia

Score 7

The annotation requires an description of stakeholder participation. Minimum requirements can be met by a simple statement detailing if and when stakeholders were consulted. Annotations may, but are not required to include information on stakeholder inputs, reactions, or needs.

Annotations are publicly available along with the draft law text itself. They serve as an explanatory accompaniment to the draft law and are often referenced in communications about the draft law.

Annotations are not assessed by an independent body. However, they are monitored by the government office as a part of its oversight of the decision-making process. Inadequacies in the annotation can lead to proposals being returned for revision prior to consideration by the cabinet. An annual monitoring process by the government office can lead to improvements in the system. The latest such revision took place in 2013.

Citation:
Sweden

Score 7

As mentioned, RIAs play some role in Sweden but the system is less elaborate compared to many other countries. The Swedish model of RIA seems to perform reasonably well with regard to participation and communication but less so in terms of independent evaluations.

Overall, simplifying regulatory frameworks appears to be conducted fairly ad-hoc. For instance, the Simplex project in the Department of Industry and Economic Development aimed at removing regulations that were either obsolete or unnecessarily obstructing private businesses. The project appears to have practiced RIA without applying the entire RIA framework.

Switzerland

Score 7

While stakeholder participation in regulatory impact assessment (RIA) procedures is a particularly strong point in Switzerland, communications processes vary between regions and policy fields. Evaluations by independent bodies are weakly developed in comparative terms.

Canada

Score 6

The quality of regulatory impact assessment (RIA) in Canada is in general satisfactory. Stakeholder participation in the past has been encouraged, although recent changes in environmental legislation have put limits on such participation. RIA results are accessible under Freedom of Information provisions. However, there is little evaluation of the quality of RIA by independent bodies.

Estonia

Score 6

The legal framework for the RIA process was set in 2012. Thus, it is still in its infancy, which explains some of its shortcomings. On the positive side, legal regulations set in the governmental decree require the involvement of relevant interest groups and public consultations in the lawmaking process. It must be formally documented which interest groups have been involved, what their proposals have been and to what extent the proposals have been taken into account. Moreover, all this information is publicly available in the explanatory paper to the draft law.
Yet the process has some weaknesses, notably that the above mentioned information is only accessible at the late stage of the policymaking process, and therefore, there is not sufficient time for intervention. Also, evaluation of the RIA results by an independent body does not exist.

Lithuania

Score 6

The process of regulatory impact assessment previous to the period under review did not ensure sufficient participation of relevant stakeholders. The quality of impact assessments was not systematically monitored, and results were not publicly available. Under the new impact assessment system, the Prime Minister’s Office is supposed to provide advice on RIA for high-priority regulatory initiatives, while monitoring the process for quality control. The impact assessment guidelines produced in 2012 provide for consultation with societal stakeholders as much as necessary during the assessment process. Under the guidelines, the results of impact assessments are to be made available on the websites of the institutions conducting the assessment.

South Korea

Score 6

RIA committees are often criticized for not being fully autonomous and for being influenced by political and economic interests. Other criticisms mentioned by the OECD are the lack of time to carry out assessments, insufficient staff, and a lack of expertise and financial resources. Many civil servants in Korea perceive RIA merely as a formality. Stakeholders are consulted in the process of RIA, which includes regular meetings with foreign chambers of commerce.

Citation:

Australia

Score 5

The preparation of a RIS follows a standard procedure in which policymakers gather the information that will enable them to evaluate the extent to which the proposed regulatory changes will result in a net benefit to the community. The Office of Best Practice Regulation within the Department of Finance and Deregulation, which administers both the federal government and Council of Australian Governments’ regulation requirements, seeks a range of
information about any new regulation. The level of information required is commensurate with the magnitude of the problem that is being addressed, and the size of the potential impact of the proposal. The Office of Best Practice Regulation uses a number of “adequacy criteria” to assess whether a RIS contains the appropriate levels of information and analysis for it to be assessed as adequate.

In 2012, the Productivity Commission, at the request of the Australian government, produced a report assessing the performance of jurisdictions’ regulatory impact analysis processes, including those at the level of the Council of Australian Governments (COAG), and identifying leading practices. Findings of major concern from the report include the following: a number of proposals with highly significant impacts are either exempted from RIA processes or are not rigorously analyzed; public consultation on policy development is often perfunctory or occurs only after development of draft legislation; and public transparency – through advising stakeholders of revisions to policy proposals and information used in decision-making, or provision of reasons for not subjecting proposals to impact analysis – was a glaring weakness in most Australian RIA processes. Furthermore, a major problem for implementing RIA requirements was that the policy decisions often occurred prior to commencement of the RIA process.

Citation:

Austria

Score 5

RIAs must be attached to every legislative proposal. The publication of draft laws for public assessment (while previous publication is legally required in many cases, in practice virtually all draft laws are published before they are voted upon) allows stakeholders within the public to comment, a frequent occurrence. Trade unions and economic chambers in particular, but other institutions as well are regularly invited to provide comment on draft laws.

However, RIAs are not written by sectoral experts, but rather by the ministry or department preparing the draft law. As a result, expertise may in some cases be limited to the sectoral expertise of the body preparing the draft law. Currently, there is no independent body that evaluates RIA quality.
Ireland

Score 5

The RIA process has not achieved all of the goals listed in this question. In particular, the accessibility and communication of the RIAs that have been performed is poor and independent quality evaluations of RIAs are not conducted.

Romania

Score 5

The legislation explicitly states that the RIA process should integrate other impact assessment methodologies, especially those related to economic or environmental impact assessment. The Public Policy Unit, located in the General Secretariat of the government, is the central RIA coordination unit. While the former focuses on the implementation of the strategic administration reforms based on the RIA prescribed procedures, the Policy Unit’s work encompasses more tangible day-to-day functions such as the improvement of ex-ante impact assessment, state capacity evaluation and intra-governmental epistemic exchange. Although the access to information legislation that stipulates that results should be posted for 30 days on ministerial websites is usually respected, the majority of RIA documents hardly involve stakeholders or transparent methodologies such as public hearings, survey, or debates. Moreover, in practice in many areas RIA exists mainly on paper, and has been primarily aimed at assessing potential legal conflicts arising from new proposals rather than focusing on their policy impact. However, in some areas (such as environmental policy) there has been greater progress towards policy-based RIA.

Slovakia

Score 5

The general quality of RIA has slowly improved thanks to the new methodology introduced under the first Fico government and the attention that Radičová’s government paid to the issue. However, while a more efficient implementation of RIA, mainly with a view to improving the business environment, has been a declared priority of all Slovak governments, the reality is still different. Consultations of relevant stakeholders take place, and their results are communicated to government and the National Council.
Bulgaria

Score 4

With the exception of the assessment of budgetary and environmental impacts of proposed legislation, RIA is largely formal in Bulgaria. There is no centralized and independent impact assessment unit. Instead, initial assessments are performed by the body proposing the legislation. Once the proposed draft has entered the phase of public consultation, civil society and academic actors are able to offer their own assessments which become a part of the documentation accompanying the proposal and are available to the public online. There are a number of examples of such assessments, but they encompass a very small proportion of new proposals.

Croatia

Score 4

In 2011 and 2012, the government’s Legislation Office created a new legislative framework for RIA. It also developed the administrative capacities for implementing RIA procedures and established stable partnerships with representatives of the business community (Croatian Chamber of Commerce, Croatian Employers Association, Croatian Chamber of Crafts, Croatian Banking Association), some civil society organizations (Croatian Law Center, Croatian Youth Network, Forum for Quality Foster Care, Croatian Business Council for Sustainable Development) and unions (Trade Union of Textile, Footwear, Leather and Rubber Industry). However, one weakness of the RIA process in Croatia is the low level of inclusion of the public in the process and the difficulty of exerting influence on regulator plans. The RIA Act stipulates that the proposed regulatory plan be posted on the official website for not less than 15 days. However, most ministries confine themselves to informing the public. In contrast, less than a third of all ministries have enabled the public to leave comments on the plans they had proposed. Such a feedback option is particularly important in cases in which regulation has not been included in the impact assessment process. Ministries are also eager to keep control over the selection of external collaborators. For this and other reasons, the participation of stakeholders is often symbolic.

Cyprus

Score 4

In its present form, impact assessments appear to be performed by bills’ authors and reviewed by a Ministry of Finance body before being forwarded to the Legal Office for legal advice. This means that the policy-proposal process has no integrated impact-assessment mechanism. Though the
current arrangement was communicated to all government bodies in January 2012, no details on its functioning have subsequently been made available. Stakeholders have no role in the assessment procedure at any stage, and it remains unclear as to precisely how the RIA report is used. Responding to an EU Commission consultation, the country’s Chamber of Commerce and Industry has proposed that stakeholders be integrated more deeply into the process, that more information be made available to the public (including stakeholders), and that the focus of assessments be shifted from qualitative to quantitative reviews.

Citation:

Italy

Score 4

The RIA process is still in its infancy in Italy. The participation of stakeholders remains limited and is not systematically pursued. The reports regularly presented every year by the Prime Minister’s Office to the parliament indicate a slow but constant improvement in this field. Communication to the public needs to be significantly improved.

Malta

Score 4

Malta’s policy on regulatory impact assessments (RIA) is not fully developed and the process of filing is also not fully integrated in Maltese policymaking. Thus it is not possible to provide extensive data with regard to the quality of the RIA process within this context. In some areas, the process of consultation is superficial, based mostly on the public’s reaction to the publication of white or green papers, or merely from consultation through a dedicated government website created for the purpose.

The government’s process is so: A draft bill is prepared; stakeholders are consulted; the bill goes to the permanent secretary and to the minister concerned; the bill is cleared by the attorney general’s office and proceeds to the Cabinet. A regulatory impact assessment for the draft bill may include other options that the Cabinet either accepts, rejects or asks for more information. As part of the RIA process, it is required that some sort of consultation is sought, yet often this step is skipped.
When regulations deal with economic or labor issues, consultation prior to the regulation’s implementation is more extensive; usually the government brings such issues before the Malta Council for Economic and Social Development, on which key economic actors sit.

An example where consultation activities are best codified and where RIAs are solidly established is with regard to planning and environmental issues. Guidelines allow for a more open, transparent and inclusive consultation process than in any other area of decision-making.

In the case of decisions or regulations established within the Malta Council for Economic and Social Development (MCESD), the RIA process allows for the possibility of informal evaluation by independent bodies. Decisions taken or proposals offered by the Malta Environment and Planning Authority can be formally evaluated by an appeal and a supervisory body, thereby allowing for a more thorough and transparent impact assessment.

Malta is still in the process of creating a RIA process that touches all aspects of public service, as well as working to expand its capacity to access empirical information from stakeholders and ascertain the likely reactions of the public or stakeholders before decisions or regulations are implemented.

Citation:
https://gov.mt/en/Government/Public%20Consultations/Pages/Public-Consultations.aspx

France

Score 3

Studies analyzing the impact of regulatory impact assessments (RIA) have stated that, although the initial skepticism of administrative bodies toward RIA has been overcome, the content of assessments has been too general and often tended to justify the need for action rather than attempt a critical, well-grounded, assessment. In addition, there are few international comparisons when examining possible alternatives. The assessments are conducted by stakeholders with a perspective of fighting for or against a policy measure. Thus, in general, such assessments have little to recommend them.
Spain

RIA analyses in Spain are quite new and currently the impulse for their use is focused toward administrative simplification and better regulation programs. Thus, the Spanish RIA process formally fails to achieve participation of stakeholders by means of consultation or collaboration, transparent communication of results to the public, and effective evaluation of assessments by an independent body and on a regular basis.

Turkey

During the period, developing a process for regulatory impact assessments (RIAs) did not help improve the quality of proposed government legislation. Instead the government more often than not drafted and adopted legislation without the appropriate consultation of NGOs or other stakeholders.

As part of the RIA conducted in 2012 for Seveso, industry participation was made possible through an Internet-based system, but the process is still in its early stages of development. In 2013, the government prepared an RIA for the EU-funded project, “Protection and Control of Integrated Pollution in Turkey.” However, this was a unique situation and the study itself a pilot project, and as such does not provide a standard for other public institutions.

Citation:

Hungary

The quality of the regulatory impact assessment (RIA) process in Hungary is poor. Even though government documents emphasize the need for stakeholder participation as part of an RIA, the very idea of outside consultation is alien to the Orbán government and thus this element is lacking. Even if a comprehensive RIA is completed, its results are rarely or just partially made available to politicians. A case in point is the limited information available on the government’s special website for regulatory impact assessments, which was created by the Orbán government (hatasvizsgalat.kormany.hu). Third, the evaluation of legislation is usually a closed process and is not really used for improving the RIA process.
Israel

Score 2

The government does not conduct regulatory impact assessments.

Luxembourg

Score 2

There is no open consultation on regulatory impact assessment (RIA) specifications. The procedure requires an inter-ministerial exchange between governmental departments and coordination groups with the consultation of experts. Impact assessment data comes from internal ministry documents, which may be consulted by the state Council of Ministers and parliamentary members.

Unlike parliamentary procedures, there is no general public access to RIA documents and evaluations are not intended for publication. As in most OECD countries, there is no risk management in the formal process of developing harmonized standards. A RIA evaluation by an independent body is still lacking.

Since the general introduction of RIAs in 2009, there is not enough transparency and participation of civil society in the process. Significant efforts should be made to increase the involvement of stakeholders.

Citation:
http://www.simplification.public.lu

Slovenia

Score 2

The RIA process in Slovenia suffers from a number of weaknesses. First, the Court of Audit found that in more than two thirds of all RIA cases, public participation was not adequate and did not meet the legal standards. Second, the conducted RIAs are only rarely made public. Third, quality control is limited. The supervision of RIA is divided among different agencies, and the supervising agencies can only check the formal correctness of the assessments, but not their substantial quality (OECD 2011).

Citation:
Belgium

Score 1
There is no formal regulatory impact assessment process in Belgium.

Greece

Score 1
RIA analyses do not really exist.

Iceland

Score 1
There is no tradition of RIA in Iceland. Therefore, the issues of participation, transparency and quality of evaluation are not relevant in this context.

Portugal

Score 1
As noted above, systematic and formalized RIA does not exist in Portugal. The assessments that take place largely fail. The participation of stakeholders does generally take place, albeit inconsistently and without always encompassing all relevant stakeholders. Impact assessment results are often not made publicly available, nor are they systematically communicated. And there are no quality evaluations of impact assessment by independent bodies.
**Indicator**

**Sustainability Check**

**Question**

Does the government conduct effective sustainability checks within the framework of RIA?

41 OECD and EU countries are sorted according to their performance on a scale from 10 (best) to 1 (lowest). This scale is tied to four qualitative evaluation levels.

- **10-9** = Sustainability checks are an integral part of every RIA; they draw on an exhaustive set of indicators (including social, economic, and environmental aspects of sustainability) and track impacts from the short- to long-term.
- **8-6** = Sustainability checks lack one of the three criteria.
- **5-3** = Sustainability checks lack two of the three criteria.
- **2-1** = Sustainability checks do not exist or lack all three criteria.

**United Kingdom**

**Score 10**

In the United Kingdom, the whole process of RIA aims to provide support for sustainable policy-making. The assessment is based on a large scale of different indicators including social, environmental and ecological and other factors; economic impact, however, seems to be the most important. The assessments analyze the impact of regulation over several time periods (i.e., short-, mid-, and long-term) and they take account of unpredictable external shocks and unforeseeable developments.

**Denmark**

**Score 9**

The RIAs have to cover all consequences, whether they be positive or negative, of an economic, administrative and environmental nature, affecting the state, municipalities, regions, business, citizens and relations to the European Union. This includes questions of sustainability. Sustainability is a central notion in the government’s policy.

Citation:
Finland

Score 9

Finnish government understands that regular and complete assessments of regulations are fundamental to the governing of complex as well as open societies and economies. In consequence, Finland has a comprehensive regulatory impact assessment (RIA) program in place and a formally adopted RIA strategy, in which general instructions on the drafting of government proposals are, when necessary, complemented by separate specific instructions issued by ministries. Assessments involve the use of large sets of indicators; and as part of the process, different interests are widely consulted and different techniques widely used. As a rule, aspects of sustainability form an integral part of the assessment process, and impact variations over time are observed and evaluated.

New Zealand

Score 9

Without using the term “sustainability,” the regulatory impact assessment (RIA) process includes major aspects of the underlying idea of this concept. Part of quality assurance monitoring is to check whether all substantive economic, social and environmental impacts have been identified (and quantified where feasible). In addition, it is an integral part of RIAs to plan for reviews of regulatory instruments that consider the following issues: Is there still a problem (and is it the one originally identified)? Are objectives being met? Are the impacts as expected? Are there any unforeseen problems? Are there any indirect effects that were not anticipated? Is intervention still required? Is the current intervention still the most appropriate, or would another measure be more suitable?

Citation:

Austria

Score 8

The potential environmental effects of legislative proposals have to be evaluated as a part of regulatory impact assessments, as do effects on employment. Various degrees require that financial and other issues be assessed. Analysis may focus on the short, medium or long term according to specific RIA legal requirements, but is commonly focused on a period of five years.

The country does have an overarching sustainability strategy, but this was still relatively underdeveloped in 2013.
Germany

Score 8
RIAs examine alternative options and possibilities for improving the quality of regulations. They analyze the intended effects and the unintended side effects of draft laws and possible alternatives. The evaluation of the actual effects of existing laws and regulations (retrospective RIA) is part of the assessment process. In addition, the process examines future trends and conducts sustainability checks. The budgetary and bureaucratic consequences of a draft law must be assessed. The environmental impact is also assessed if the measure has an environmental dimension. No regular social-impact assessment is conducted. The main goal of the assessment process is evaluating the necessity of a regulation. Therefore, the assessment of alternatives is part of the impact assessment process. This includes the assessment of scenarios in which no additional regulation is introduced.

United States

Score 8
There is no separate check required for “sustainability” per se. Since that term refers to an indefinite variety of context-specific normative standards, however, one could argue the U.S. regulatory impact assessment process does include a sustainability check. After all, assessments are expected to consider all important costs and benefits.

Canada

Score 7
Canada does not have a formally adopted sustainability strategy. In a sense, this is not surprising, as there are different types of sustainability (environmental, economic, social). There is also no consensus as to what sustainability means or to how it should be measured. To be sure, many RIAs address sustainability issues, but the methodologies used differ widely. RIAs generally try to integrate sustainability checks in order to provide a basis for decision-making, develop an exhaustive set of impact indicators, and analyze both short- and long-term impacts. However, most assessments lack at least one of these criteria in practice.
Netherlands

Score 7

In the Netherlands, RIAs are broadly and effectively applied in two fields: Environmental Impact Assessments (EIMs) and Administrative Burden Reduction Assessments (ABRAs). EIMs have been legally prescribed since 1987. Everybody who needs a government license for initiating substantial spatial or land-use projects with potentially harmful environmental impacts is obliged to show these impacts through research. Meanwhile, more than 1,000 EIM reports have been administratively and politically processed. They guarantee that environmental and sustainability considerations play a considerable role in government decision-making. Environmental impact assessments sometimes lose out to economic impact assessments. There are no systematic social – or, for example, health – impact assessments.

Norway

Score 7

The government’s Instructions for Official Studies and Reports require that a sensitivity analysis must be made if any appreciable uncertainty exists, and that alternative instruments should be assessed, including instruments not of a regulatory nature (e.g., economic instruments). In practice, the extent to which alternative options are given careful consideration and submitted to a systematic cost-benefit analysis varies from case to case. Quantification of the costs and benefits of different alternatives is relatively rare.

Poland

Score 7

Article 5 of the Polish constitution provides for the principle of sustainable development, according to which the state ensures the protection of the environment, guided by the principle of sustainable development. The first national sustainability strategy was adopted in 2000. While the government has increasingly paid mention to sustainability issues in policy documents, sustainability checks are not an integral part of regulatory impact assessments. Assessments cover a broad range of issues, yet tend to treat environmental issues as less relevant than economic issues. There is also no systematic distinction among impacts measured in the short-, medium- and long-term.
Sweden

**Score 7** Environmental sustainability is one of several mainstreamed goals in the policy process. In theory at least, all government bills, procurements, and directives to Royal Commissions are supposed to be assessed to determine their impact on environmental sustainability. As for other types of sustainability criteria, there is little evidence available about the degree to which they are considered in the RIA process.

Czech Republic

**Score 6** Sustainability checks are an integral part of every RIA assessment, but are not very comprehensive. The checklist requires a response to the question of whether there are effects on social, economic and environmental issues and for an indication of what those effects are. However, the 2011 RIA guidelines do not specify how to assess or quantify these effects.

Lithuania

**Score 6** Lithuanian policymakers are supposed to conduct sustainability checks within the new framework for regulatory impact assessment. The 2012 impact-assessment guidelines provide for the assessment of economic, social and environmental impacts, among other factors. Both short-term and long-term impacts should be assessed under the new guidelines. However, the guidelines do not provide an exhaustive set of impact indicators addressing these impact dimensions. Producing high-quality environmental reviews is likely to remain a challenge under the new system, as it focuses on impacts within the business environment and new administrative burdens. The 2003 impact-assessment guidelines contained similar provisions with respect to sustainability checks.

Mexico

**Score 6** RIAs highlight international benchmarking to reinforce their investigations. As one example, in a recent development, the Mexican government signaled its intention to become a world leader in sustainable tourism. Here, sustainability relates to energy efficiency, improved environmental performance and the protection of cultural heritage. The government partnered with the private firm EC3 Global to support the adoption of their trademark EarthCheck science and solutions for tourism operators and
companies committed to sustainable practices and to align their performance with global benchmarks, endorsed by the World Tourism Organization. EarthCheck is an internationally recognized environmental management and certification program with more than 1,300 members in 70 countries. The program improves operational performance of member organizations and reduces costs.

South Korea

Score 6

The assessment of sustainability implementations at policy level in Korea is regulated by the Sustainability Development Act, which was enacted in July 2007 and overseen by the Presidential Commission on Sustainable Development. Its goal is to implement, promote, share, educate, network, monitor and make policy proposals on sustainable development in Korea. The main three principles of the act are, firstly, laying out national-level sustainable basic strategies every 20 years; secondly, laying out specific action plans every five years, and lastly, monitoring and assessing the implementations every two years. It considers quality of the environment, vulnerability to environmental degradation, environmental degradation level, social and institutional capacities to respond, and sharing of responsibility with the international community. Critics of the outgoing government argue that under the Lee administration’s RIAs, sustainability checks in the Four Rivers Project were not properly carried out.

Citation:

Chile

Score 5

RIAs do not necessarily analyze a regulation’s impact on sustainability regarding the three criteria. Especially the short-, mid-, and long-term analysis tends to focus exclusively on economic but not on ecological nor social aspects.

Estonia

Score 5

The sustainability dimension is included in the methodological guidelines of RIA. The guidelines demand an assessment of the policy’s impact the short-, medium- and long-term. However, sustainability takes quite a marginal position in the entire impact assessment process. The existing set of indicators is not explicitly linked to the sustainability check.
Estonia has a national long-term (30 year period) sustainability strategy, “Sustainable Estonia 21,” adopted by the national parliament in 2005. However, the latest government decree and the methodological guidelines do not make any reference to this national strategy.

**Switzerland**

Score 5

Given the decentralized political and administrative system of Switzerland, it is difficult to answer the question of whether the government conducts effective sustainability checks within the framework of RIA.

**Croatia**

Score 4

Croatia adopted a sustainability strategy in 2009. However, neither this strategy nor the RIA Strategy or the RIA Action Plan for 2013 – 2015 provide for comprehensive sustainability checks. RIA is supposed to consider a broad range of impacts, including fiscal, economic, social and environmental, but the actual quality of assessments is low. There is no systematic differentiation between the short-, mid- and long-term.

**Ireland**

Score 4

Some of the suggested sustainability checks are included in the RIA Guidelines published in 2009, but there is no explicit mention of “sustainability” in that document and it does not seem that such checks are integrated into the RIA process. There is explicit provision for the inclusion of poverty impact assessments.

**Italy**

Score 4

Sustainability checks within the framework of RIA are still underdeveloped. The reports of the Prime Minister’s Office to the parliament show they are not yet systematically integrated within RIA and they are not exhaustive from the point of view of the indicators included (economic indicators play a greater role than social and environmental ones).
Bulgaria

Score 3  
Most of the regulatory impact assessments in Bulgaria are only formal, with the exception of budgetary and environmental issues. Moreover, environmental checks focus on issues of pollution and wilderness protection, rather than greenhouse gas emissions. Other economic and social impacts are generally being addressed superficially and the input of non-government actors in the public consultation process is generally ignored.

Cyprus

Score 3  
The questionnaire on which assessments are based asks whether proposed regulations might have a positive or negative impact on the country’s economic, social and environmental aspects of life. This assessment is based on a limited number of specific factors, with just 10 social and eight environmental issues addressed. The questionnaire asks for yes or no answers, while also soliciting detailed explanations. The extent to which information sufficient to substantiate the yes or no responses is provided remains unclear. There is no mention of time horizons in the assessment, which may mean the idea of sustainability is effectively ignored.

France

Score 3  
There is no real systematic sustainability strategy except in the ministries, where EU regulations require such an examination.

Japan

Score 3  
According to the 2001 Government Policy Evaluation Act, policy effects have to be evaluated in terms of the three criteria of necessity, efficiency, and effectiveness. These terms are somewhat flexible and do not necessarily encompass sustainability concerns. Indeed, actual evaluations apply the three guiding principles only in a somewhat loose way. LDP Prime Minister Abe has indicated that he wants to focus regulatory reform around the issue of economic revitalization. While this is a slightly different field than policy
evaluation, one might also expect that the three criteria of the Policy Evaluation Act will in the future be interpreted in light of the immediate interest in revitalization, rather than reflecting longer-term aspects of sustainability. However, any such interpretation only a few months after the LDP-led coalition’s accession to power remains speculative.

Luxembourg

Score 3

There is no systematic sustainability assessment process in Luxembourg. The government does plan to introduce effective sustainability checks and the systematic monitoring of relevant administrative and legislative acts. In general, sustainable development and sustainable decision-making needs to be implemented at all levels (economic, social and environmental) to evaluate the impact of policies and policy side effects. It is essential that regulatory impact assessment (RIA) procedures have been agreed to benefit from greater coherence and coordination between ministries, civil society and stakeholders. Luxembourg has to mainstream sustainability checks at all levels by establishing harmonized legislation with binding RIA standards.

Citation:

Malta

Score 3

While regulatory impact assessments are a compulsory regulatory tool in Malta, the government has no formally adopted sustainability strategy. Sustainability checks that do exist are often found only in areas involving planning and the environment. The effectiveness of key regulations and policy initiatives are assessed mainly through Malta’s National Reform Program, the annual report that Malta (like all other EU member states) submits to the European Commission. This report is like a progress check, where Malta provides detailed updates relating to its Europe 2020 targets as a result of its policies. These reports include quantitative impact indicators that can illustrate the effectiveness (or failures) of regulatory projects that touch on social, environmental and economic issues. The country’s Europe 2020 progress is subsequently reviewed by the European Commission and country-specific recommendations are officially endorsed by the European Council. But this whole process happens essentially after the fact – basically a report on decisions the government made – and is not part of an impact
assessment process. Hence, the sustainability and effectiveness of policies and measures are still assessed on an annual basis. Moreover, the reviews from the European Commission and the European Council provide an ulterior check of policy effectiveness for short- and long-term targets within the context of Europe 2020.

Citation:
http://ec.europa.eu/europe2020/making-it-happen/index_en.htm

Portugal

Score 3
Sustainability checks are not integrated systematically into impact assessments. They may take place in some impact assessments but not in others, in a rather ad hoc fashion that depends on who is carrying out the impact assessment. The same is the case with regard to the indicators that sustainability draws on; and the temporal dimension of the analysis.

Romania

Score 3
In theory the methodology manual requires that sustainability concerns be incorporated in RIA reports but in practice most reports are primarily legalistic and pay limited attention to sustainability. The Romanian regulation’s consideration of sustainability tends to be the result of EU directives.

Slovakia

Score 3
Effective sustainability checks are missing even in the new RIA methodology (in place since 2010). This draws a distinction between five different dimensions (public finance, social situation and employment, business environment, environment, and informatization of society), but does not differ between the short-, the medium- and the long-term impact. Even on paper, a systematic approach is missing and the reality is even weaker. In the case of the Fico government’s laws on income taxes and labor legislation, for instance, the adopted RIA, in line with analyses by the Fiscal Responsibility Board, indicated negative effects on economic growth. Confronted with this negative assessments, however, the Fico Cabinet adjusted the fiscal forecasts rather than the laws.
Spain

RIA analyses in Spain are quite new and currently the impulse for their use is focused toward administrative simplification and better regulation programs. Thus, the Spanish RIA process formally does not include systematic sustainability checks on an exhaustive set of indicators (including social, economic, and environmental aspects of sustainability) or that consider the short- to long-term effects of regulatory change.

Turkey

The government has conducted several sustainability checks in the framework of regulatory impact assessments (RIA), such as on the Waste Electrical and Electronic Equipment (WEEE) Directive, the Habitat Directive or the Discharge Directive.

Still, the examples refer to internationally sponsored projects and do not point to a general administrative practice. Politicians and experts widely use the term “sustainability” as a policy slogan, but there is no formally adopted sustainability strategy in Turkey.

Citation:

Hungary

Hungary’s National Assembly only passed a national sustainability strategy in March 2013. This lengthy document surveys related international documents and provides Hungarian-centric applications for major issues, with a detailed list of goals in closing. However, there is only a small paragraph related to regulatory impact assessments (RIAs) in the document; what’s more, the sustainability strategy and the RIA process have yet to be coordinated. Sustainability checks are not an integral part of the RIA process, and the set of indicators used for RIAs are in general limited and are lacking long-term thinking.
Israel

Score 2

The government does not conduct regulatory impact assessments.

Latvia

Score 2

Annotations have no specific sustainability checks. Sustainability as an issue is not integrated into the annotations, impact indicators are not consistently used, and there is no requirement to perform a short-, medium- and long-term analysis. Some annotations do provide such information, but this is at the discretion of the civil servant preparing the annotation.

Latvia has not adopted a specific sustainability strategy. However, sustainability as a concept is integrated into Latvia’s long-term Latvia 2030 strategy. As draft policies are assessed for compatibility with this long-term strategy, sustainability issues may be taken into consideration.

Citation:

Slovenia

Score 2

The Slovenian RIA guidelines provide relatively far-reaching sustainability checks. However, the specification of assessment criteria and the set of indicators suffers from some gaps (OECD 2011), and the actual quality of RIA is very uneven. In some cases, there are only vague assessments; in others, comprehensive analytical work is done.

Citation:

Australia

Score 1

Sustainability checks are not, at least explicitly, an integrated component of RIAs in Australia. There is no formally adopted sustainability strategy in Australia.
Belgium

Score 1  There is no formal regulatory impact assessment process in Belgium.

Greece

Score 1  Sustainability checks do not exist.

Iceland

Score 1  There is no tradition of RIA in Iceland. Therefore, sustainability checks are not relevant in this context.
